- Tested multiple applications related to various domains(Healthcare, E-commerce, etc.) across platforms such as android, iOS, web, and IoT
- Performed smoke, functional, integration, compatibility, regression, GUI and release acceptance testing of builds on a regular basis
- Collaborated effectively with development resources during all stages of Quality Assurance to communicate testing

Jan2016–July2016	**Trainee Software Engineer** / *Transolutions Pvt Ltd*

- Developed test plan for testing the application after analyzing system specification document and assisted developers to debug issues
- Reviewed all test documents written by each member of the QA team
- Organized records and reports on all scheduling testing

PROJECTS DESCRIPTIONS

OMS (Order Management System)

- It is a system in which a user can create, update and cancel all kinds of orders such as Sale, Purchase etc.
- Here, user can create SKU, customer, category, vendor and set pricing/discount rules as well as can manage inventory by performing operations such as edit batch info, change MRP, etc.
- In this, the user can also perform some warehouse operations under WOPS
- All the VAS, notifications, alerts, user administrations, client profile, are to be maintained for every client
- Zephyr and Excel are used to write test cases while Jira is used for project management
- It is a purely Web-based application

WMS (Warehouse Management System)

- It is Web and Android application and works in integration to OMS
- User can perform warehouse operations, i.e. inward and outward parallelly across all transactions
- Inventory can also be viewed at micro-level i.e. Bin and Location level and can be used in Warehouse only
- Cycle Count, Audit, Inventory Movement, Grade Change, Sorting, etc. can be maintained

Livongo Health

- It is a diabetes control management system that helps the user to control their diabetes by creating personalized experiences, using data and clinical science that deliver positive health outcomes, lower costs, and help members thrive
- It is a web, Android, iOS and IoT project and handled the IoT module single-handedly
- Jira and Confluence is used for project management while TestRail for writing and executing test cases
- Used Zeplin for Mockups while Screencastify, Jing, Color Picker and ColorZilla are used for UI Testing

SKILLS

- Highly Motivated and Self-Driven
- Strong organizing capabilities and good at people management skill
- Effective communication skills
- Good Knowledge of Agile and Scrum
